## Saw Chain and Guide Bar

### A Guide Bar Length

Guide bar's length is represented by the cutting length, which is different from its total length.

### B Depth Gauge

Depth gauge means the gap between the top of the depth gauge and the top of the cutter and determines how deep the cutting teeth gets into the wood.

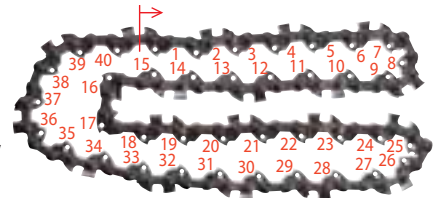

### C Chain Pitch

Chain pitch is the size of the chain, and is defined as the distance between any three consecutive rivets divided by two. Pitch is important because the drive sprocket must be the same pitch as the chain.

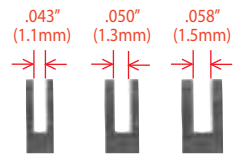

### D Drive Link

The length of saw chain is determined by counting the number of drive links in the saw chain.

### E Gauge

Chain Gauge is the drive link's thickness where it fits into the guide bar groove, matching the guide bar gauge. The gauge of the chain and the gauge of the bar must match.

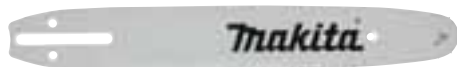

### F Cutter Type

F Cutter Type	MICRO CHISEL	SEMI CHISEL	CHAMFER CHISEL	FULL CHISEL
Abbreviation	MC	SC	CC	FC
End View				

## Guide Bar Type

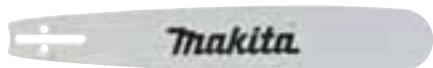

### Sprocket Nose Bars

Sprocket nose bars have a rotating sprocket mounted on at the tip of the bar. As the chain moves along the bar, the sprocket teeth carry the chain around the tip smoothly with less friction.

### Hard Nose Bars(Solid Bar)

High wear resistant stellite is welded onto the tip. Hard nose bars are made for difficult situation, including fire-damaged forests, deserts, or sandy environments.

### Carving Bars

Carving bars are made of high-quality steel and high wear resistant stellite is welded onto the tip. The small nose radius is designed for precision cutting. The carving bars are made for especially pruning and carving.

## Guide Bar Maintenance

### Chain Tension

From time to time the saw chain tension before use. The saw chain may become loose after many hours of use.

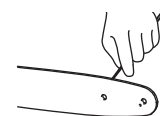

### File Bar Edge

File bar edge with a flat file to keep 90° once a week.

### Clean Guide Bar

Clean out the chips and sawdust every time when you sharpen or replace the saw chain

### Bar Nose Grease

Lubricate a whole sprocket regularly to make sure that the saw chain can rotate with less friction.

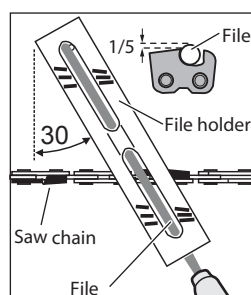

## Sharpening Saw Chain

### Round File and File holder

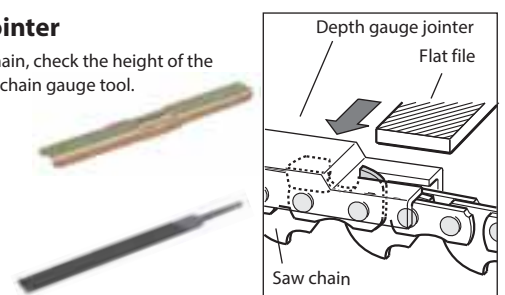

The file can be guided more easily if a file holder is employed. The file holder has markings for the correct sharpening angle of 30° (align the markings parallel to the saw chain) and limits the depth of penetration (to 4/5 of the file diameter).

### Depth gauge jointer

After sharpening the chain, check the height of the depth gauge using the chain gauge tool.

### Flat file
