18V LXT BL Cordless Cleaner

Capsule type

Dust capacity **730 mL**

Improved dust-resistance

When capsule is installed securely, two ribs inside capsule press the inside frame of filter to hold the filter tight.

DCL283F

Trigger switch

DCL284F

One-touch push button switch

Paper dust bag type

Dust capacity
Cloth dust bag **500 mL**
Paper dust bag **330 mL**

Improved dust-resistance

Moving stopper prevents front cover from closing if paper dust bag is not installed tight.

DCL285F

One-touch push button switch

Integrated cyclone unit

Dust capacity **250 mL**

Integrated Cyclone unit

The filter is less clogged due to separation of fine dust through a cyclone air flow, reducing the decrease in vacuum power of cleaner.

DCL286F

One-touch push button switch

High suction power and Low noise level

- Achieved by redesigning the exhaust air flow path of the motor to reduce wind noise.
- Equipped with high-speed BL motor to ensure high suction power.

Low noise

DCL283F

63 [Mode 4] dB(A)

DCL284F **65** [Mode 4] dB(A)

DCL285F **65** [Mode 4] dB(A)

DCL286F **66** [Mode 4] dB(A)

Redesigned Floor/ Carpet T-nozzle

- Redesigned structure reduces the resistance caused by suction, providing smooth running.
- Redesigned inside air flow path reduces the noise made inside the nozzle.

Trigger switch + Sliding lock-on switch

(DCL283F only)

allows for long continuous cleaning with less fatigue.

By moving ① sliding lock-on switch to ON position, ② interlocking trigger switch can be locked on for continuous cleaning.

4-suction power mode selection with mode memory function

(DCL284F / DCL285F / DCL286F only)

- The cleaner can memorize a previous power mode and resume vacuuming at the same mode as last time user turned off for user convenience.
- Power mode can be selected before the cleaner is turned on.

Single LED job light

also functions as a battery capacity warning lamp.

Pipe locking mechanism

Pipe is fixed with the locking mechanism to prevent it from accidentally coming off.

Pipe with beveled end

Cleaning of tight places can be done without nozzle by using the beveled end of pipe as a nozzle.
